

# WINNARD

## DAF LF BRAKE DISC DESIGN UPGRADE

In response to customer feedback we have improved the design of our DAF LF brake disc range. The current design has a steel ABS ring and incorporates a C-spring to hold the ABS ring in place.

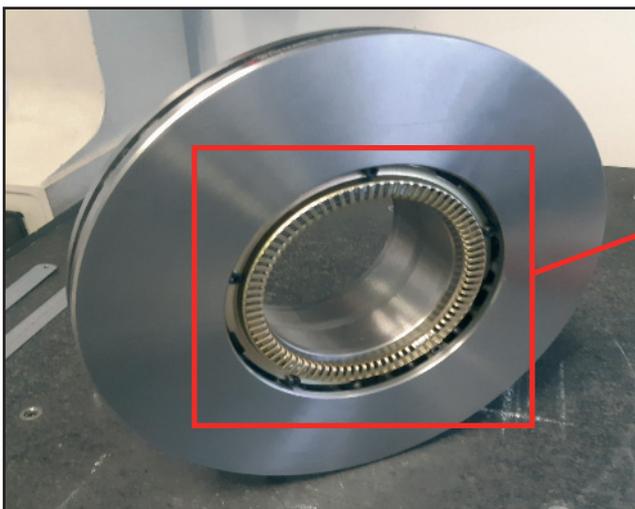

In our experience this C-spring is susceptible to movement and corrosion during it's operating life and can cause the ABS ring to work loose.

CURRENT C-SPRING DESIGN

Our new design is bolted in place ensuring that the ABS ring does not move even after extensive wear and corrosion.

Part numbers being upgraded during 2020: **DA1051 / DA1052 / DA1054 / DA1060**

This new style ABS ring will also be available to purchase separately, new part number ABS0079.

If you want **WINNARD** inside the box, **makes sure it has WINNARD on the box**
